LIST OF ACRONYMS

<u>Abbreviation</u>	<u>Description</u>
bgs	below ground surface
BNSF	BNSF Railway Company
BRA	baseline risk assessment
CLP	Contract Laboratory Program
COC	chemical of concern (COCs for plural)
cPAH	carcinogenic polynuclear aromatic hydrocarbons (cPAHs for plural)
DEQ	Montana Department of Environmental Quality
EE/CA	engineering evaluation/cost analysis
EPA	U.S. Environmental Protection Agency
EPC	exposure point concentration (EPCs for plural)
EPH	extractable petroleum hydrocarbons
ERCL	environmental requirement, criterion, and limitation (ERCLs for plural)
FS	feasibility study
GPS	Global Positioning System
HASP	Health and Safety Plan
IDW	investigation-derived waste
LSI	Listing Site Inspection
MADEP	Massachusetts Department of Environmental Protection
MRL	Montana Rail Link
MPDES	Montana Pollutant Discharge Elimination System
PAH	polynuclear aromatic hydrocarbon (PAHs for plural)
QAPP	Quality Assurance Project Plan
QA	quality assurance
QC	quality control
RA	remedial action
RBCA	risk-based corrective action
RBSL	risk-based screening level (RBSLs for plural)
RD	remedial design
RI	remedial investigation
ROD	Record of Decision
RPD	relative percent differences (RPDs for plural)
SAP	Sampling and Analysis Plan
SI	supplemental investigation
SIM	selective ion monitoring
SOG	Standard Operating Guideline (SOGs for plural)
SOW	Statement of Work
SSL	soil screening level (SSLs for plural)
TEF	toxicity equivalency factor
TRW	Technical Review Workgroup
UCL	upper confidence level
VOC	volatile organic compound (VOCs for plural)
VPH	volatile petroleum hydrocarbons
WWTP	wastewater treatment plant
mg/L	milligrams per liter
mg/kg	milligrams per kilogram
µg/L	micrograms per liter

TABLE 8**SURFACE SOIL ANALYTICAL RESULTS (DEQ EXPOSURE AREAS) - 2010**
Burlington Northern Livingston Shop Complex

Notes:

- (a) Montana Department of Environmental Quality (DEQ)-defined exposure area identified in DEQ's letter to BNSF dated 10 June 2010.
- (b) Sampling grid identified in Final Task J Supplemental Investigation Work Plan for Surface Soil dated December 2005 (Task J SI Work Plan - DEQ Version).
- (c) Cleanup/screening level from Record of Decision (ROD) (DEQ 2001).
- (d) Risk-based screening levels (RBSLs) based on Montana Tier 1 Risk-Based Corrective Action Guidance for Petroleum Releases dated October 2003.
- (e) RBSLs from Master Table - All Potential Tier 1 RBSLs for Soil (Appendix C) of Montana Tier 1 Risk-Based Corrective Action Guidance for Petroleum Releases dated September 2009.
- (f) Soil screening levels (SSLs) based on U.S. Environmental Protection Agency (EPA) Regional Screening Levels (RSLs) for Chemical Contaminants at Superfund Sites dated May 2012 for contaminant leaching to groundwater pathway. An SSL has been calculated based on Montana's numeric water quality (DEQ-7) standards, adjusted for a dilution attenuation factor (DAF) of 10. The DEQ-7 adjusted risk-based SSL is equal to the ratio of the DEQ-7 standard to the tap water RSL multiplied by the risk-based SSL and a factor of 10. If the DEQ-7 standard and EPA maximum contaminant level (MCL) were the same value, the MCL-based SSL provided in the RSL table (May 2012), adjusted for a DAF of 10, was used. DEQ has determined that a DAF of 10 is appropriate for conditions in Montana. If no DEQ-7 standard is available, the EPA SSL, adjusted for a DAF of 10, has been provided.
- (g) Industrial RSLs based on EPA RSLs for Chemical Contaminants at Superfund Sites dated May 2012. If the compound is a non-carcinogen, the non-carcinogenic RSL has been divided by 10. The non-carcinogenic RSL for lead has not been divided by 10.
- (h) Soil samples were analyzed for lead using EPA Method 6010. Samples were sieved using a 250 micron (No. 60) sieve by the analytical laboratory prior to analysis for total lead.
- (i) "na" denotes not applicable.
- (j) Screening levels from EPA Recommendations of the Technical Workgroup for Lead for an Interim Approach to Assessing Risks Associated with Adult Exposure to Lead in Soil (EPA 1996), including use of the Technical Review Workgroup memorandum dated April 1999.
- (k) "--" denotes a ROD cleanup level or screening level (RBSL/RSL/SSL) has not been established.
- (l) "NA" denotes not analyzed per Task J SI Work Plan - DEQ Version and DEQ's letter dated 10 June 2010.
- (m) Soil samples were screened for extractable petroleum hydrocarbons (EPH) using modified EPA Method 8015. The EPH screening method is a screening technique for EPH analysis via the Montana Method. If the EPH screen result exceeded 200 mg/kg, the sample was analyzed for EPH fractions and polynuclear aromatic hydrocarbons (PAHs), unless sample was already designated for PAH analysis (as a primary analysis).
- (n) "i" denotes the value has been qualified as an estimated concentration based on data validation findings.
- (o) Soil samples were analyzed for EPH fractions using Massachusetts Department of Environmental Protection (MADEP) EPH Fractionation Method.
- (p) ROD values for petroleum in surface soil are RBSLs based on Montana Tier 1 Risk-Based Corrective Action Guidance for Petroleum Releases (Final Draft) dated March 2000.
- (q) "<" denotes analyte was not detected at the indicated method reporting limit.
- (r) "U" denotes the analyte was not detected at the indicated value based on data validation findings.
- (s) Soil samples were analyzed for PAHs using EPA Method 8270 in selective ion monitoring (SIM) mode.
- (t) "J" denotes estimated value. The analyte is present but at a concentration less than the limit of quantitation.
- (u) Carcinogenic PAH (cPAH).
- (v) Possible total cPAHs are based on the relative toxicity of each cPAH to benzo(a)pyrene and were calculated by multiplying the individual cPAH concentrations by a toxicity equivalency factor (TEF) and summing the adjusted concentrations. If no individual cPAH was detected, a value of one half the method reporting limit was used in the calculation as required by DEQ, based on the procedure normally used for risk assessments.
- (w) Soil samples were analyzed for volatile petroleum hydrocarbons (VPH) by the MADEP VPH Method [including methyl-t-butyl-ether (MTBE), benzene, toluene, ethylbenzene, xylenes, and naphthalene, collectively referred to as MBTEXN].

Detected values shown in bold.

Sub-samples were either composited in the field or composited by the analytical laboratory prior to analysis.

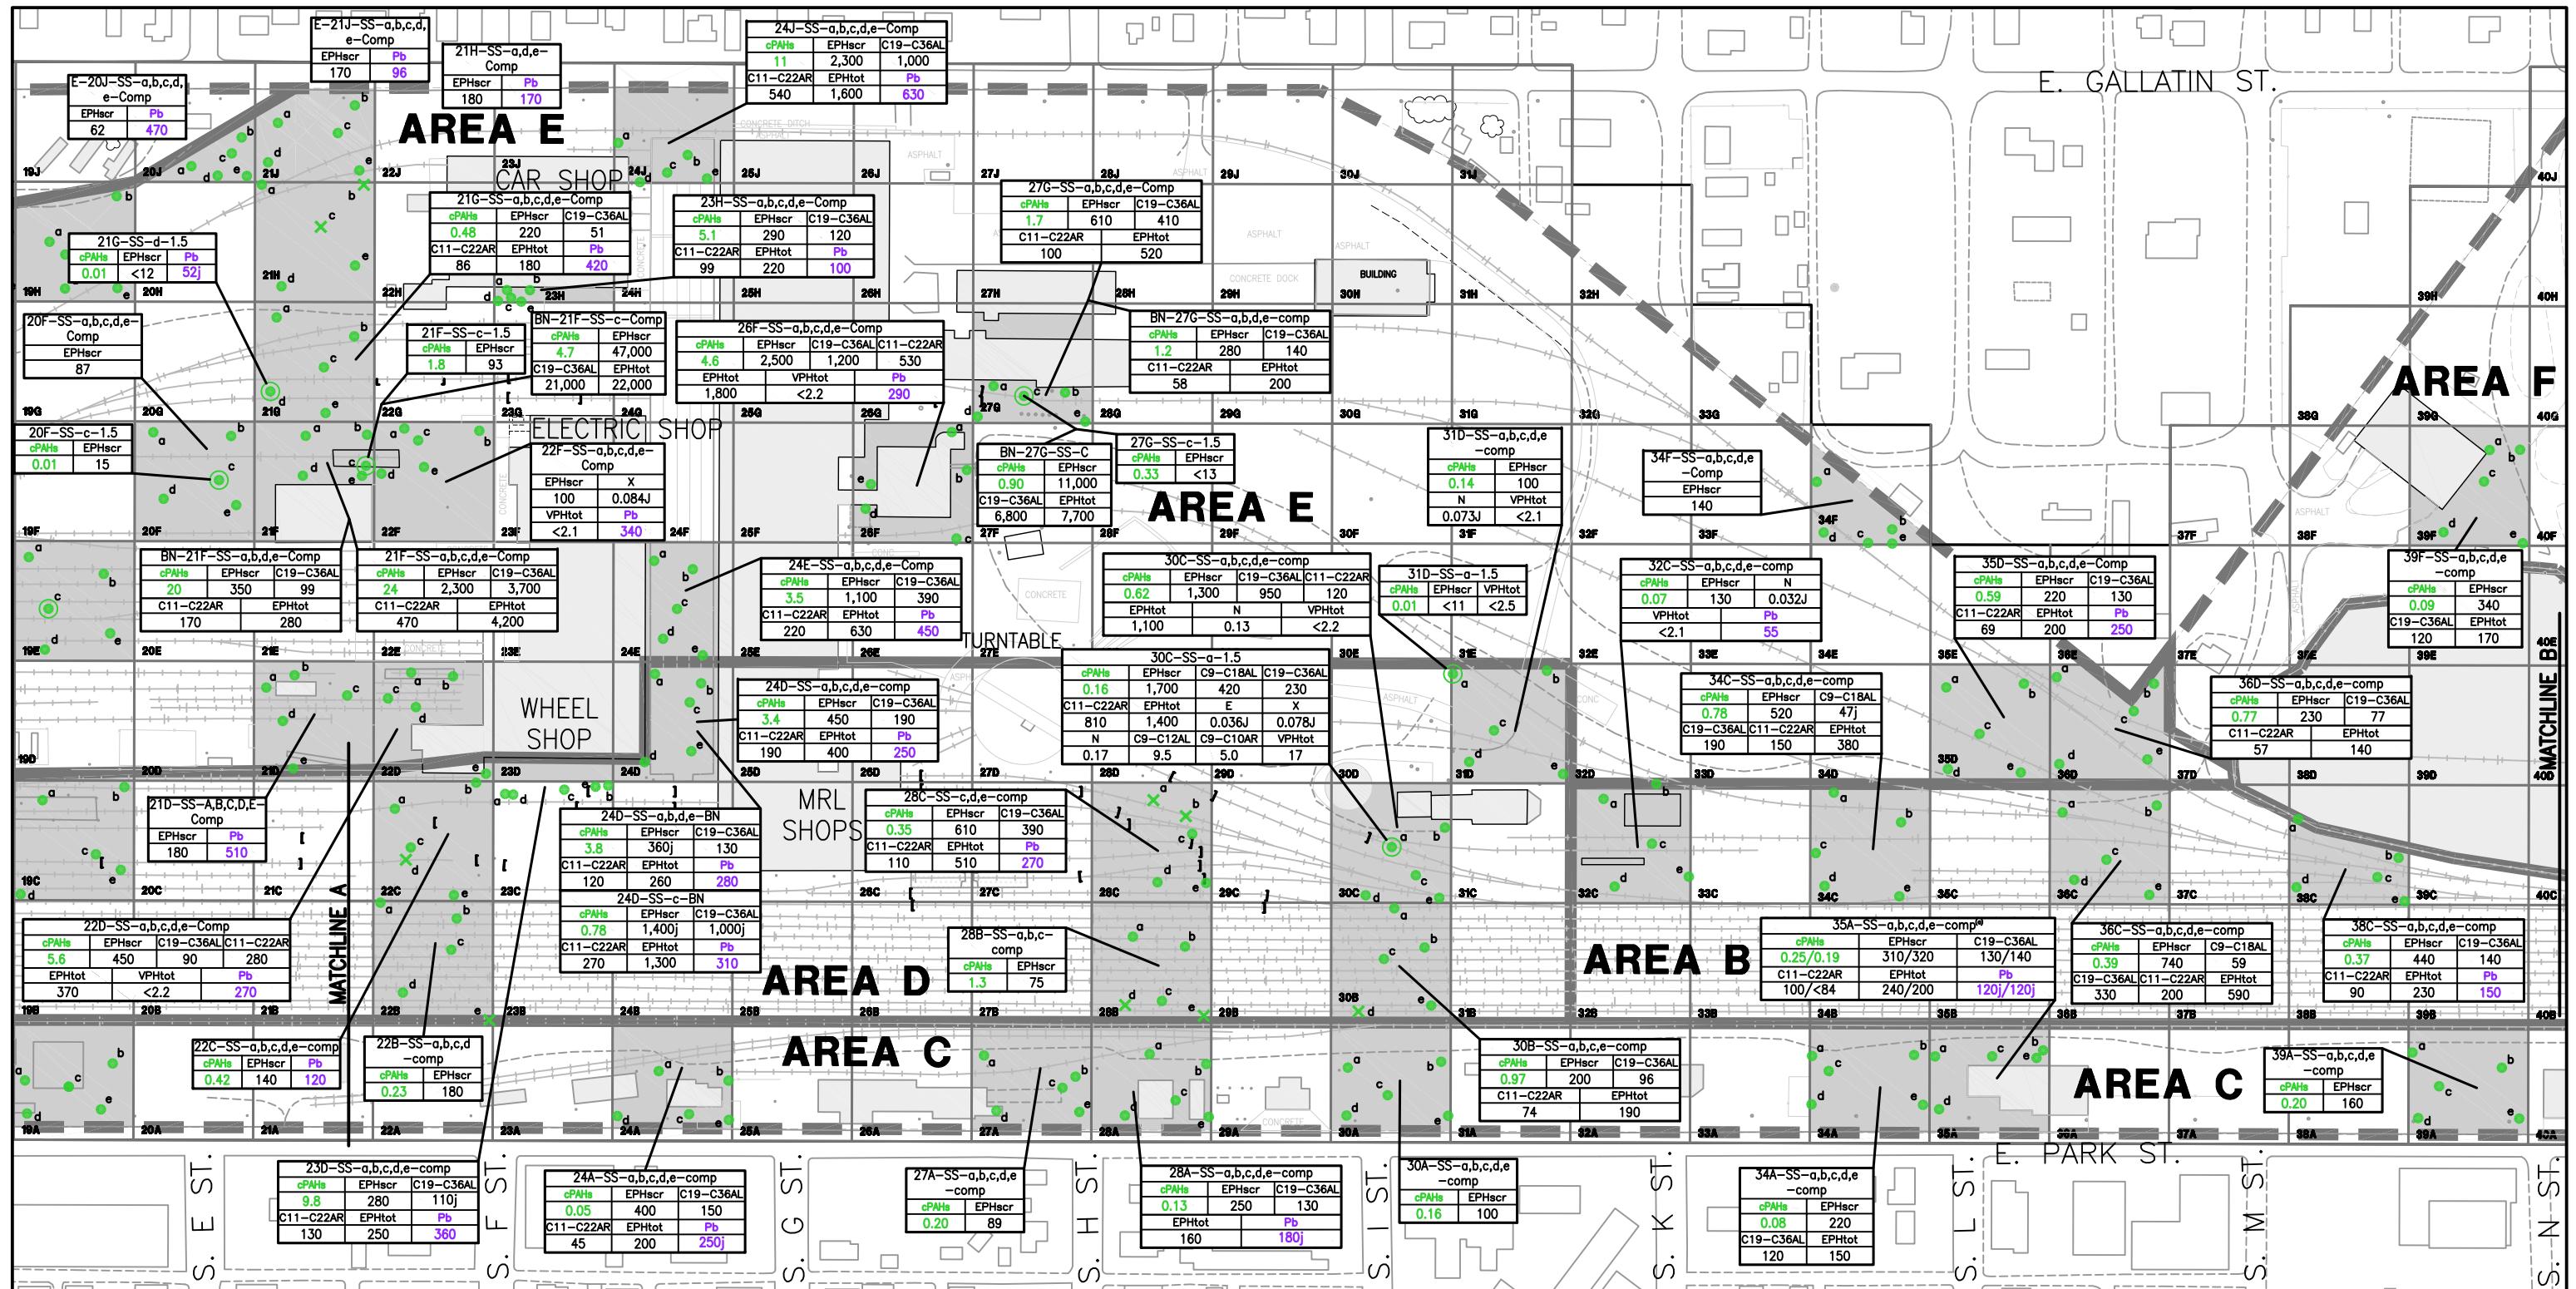

Analytical results are reported on a dry weight basis.

mg/kg - milligrams per kilogram

 Discrete sample collected 18 to 24 inches below ground surface.
