EXECUTIVE SUMMARY

Water and Environmental Technologies (WET) conducted a focused Environmental Site Assessment (ESA) on behalf of the 4 Ranges Foundation and the City of Livingston at the Katie Bonnell Park in Livingston, Montana. The park and adjacent one-acre parcel, referred to throughout this report as the Subject Property, are the proposed locations for a community wellness center building and parking lot. The purpose of the focused ESA was to evaluate potential risks associated with the Subject Property's proximity to the adjacent Livingston Railyard Facility (Railyard), owned by BNSF Railway Company, which is a maximum priority Comprehensive Environmental Cleanup and Responsibility Act site (CECRA, also known as State Superfund Facility). According to the Montana Department of Environmental Quality's Record of Decision (ROD) for the State Superfund Facility, the Railyard is currently known, or has been known to contain elevated levels of volatile organic compounds (VOCs), petroleum, polycyclic aromatic hydrocarbons (PAHs), and lead in soil, soil vapor, and groundwater (DEQ, 2001).

This focused ESA included an investigation of surface soil, subsurface soil, and soil vapor. Groundwater directly underlying the Subject Property was not investigated for three reasons: 1) construction of the wellness center would not extend deep enough to contact the groundwater table, which is approximately 30 feet below ground, 2) the water supply for the future wellness center would be piped city water, not groundwater, and 3) the ongoing groundwater monitoring program associated with the adjacent Superfund site indicates groundwater contamination does not extend to the proposed locations of any occupied structures, as depicted with the yellow contour line on Figures 1 and 2.

Summary of Soil Testing

Concentrations of all metals detected in Subject Property soil samples are commensurate with established natural background metals concentrations in Montana soils (Hydrometrics, 2013). Of all the metals detected in soil, lead is the only one that is known to be associated with contamination from historical Railyard activities. Concentrations of lead in soil samples collected as part of this ESA ranged from 4 mg/kg to 37 mg/kg, all below the Railyard Superfund cleanup level of 750 mg/kg. Concentrations of all VOCs, hydrocarbons, and PAHs in all samples were below laboratory detection limits and/or Railyard cleanup levels and all applicable screening levels.

Summary of Soil Vapor Testing

Results of soil vapor testing indicate that all known air and soil vapor constituents of concern associated with the adjacent Superfund Facility are not present beneath the Subject Property at levels that would present a risk to future building occupants. Chloroform, however, was detected in all three soil vapor samples, and one of the three samples contained chloroform at an elevated level. Two potential sources of chloroform in soil vapor include irrigation with a chlorinated water supply (EPA, 2000) and degradation of chlorinated solvents such as tetrachloroethene (PCE) (Reductive Dichlorination, 2023). Although PCE is a known contaminant related to the adjacent Railyard, chloroform is routinely sampled for, but rarely detected in groundwater samples

collected from wells closest to Katie Bonnell Park. When chloroform has been detected in groundwater underlying the Railyard Facility, it has been at trace concentrations and below all applicable regulatory screening levels. Chloroform is not a listed Contaminant of Concern for the Railyard Superfund Facility in soil, soil vapor, or groundwater.

Recommendation

Regardless of the actual source of chloroform detected in soil vapor underlying the Subject Property, and assuming the Subject Property is selected as the location for the community wellness center, WET recommends that occupied structures on the Subject Property be equipped with a vapor barrier and/or active sub-slab mitigation system (generally similar to a radon mitigation system) out of an abundance of caution to protect indoor air quality in the future wellness center from any subsurface soil vapor contaminant. A properly designed and constructed vapor barrier and/or active mitigation system would effectively prevent vapor intrusion that could be caused by irrigation with chlorinated water, or the adjacent Railyard, or other unknown factors.

1 INTRODUCTION

The Subject Property is located at the existing Katie Bonnell Park in Livingston, Montana and includes the adjacent 1-acre lot to the east, which is owned by Montana Rail Link (MRL) (**Figure 1**) according to Montana Cadastral records. The Subject Property is located northeast of the Railyard, which is a maximum priority CECRA site. The intent for the property is to develop a community wellness center that will serve the City of Livingston.

According to the Record of Decision (ROD), the Railyard located southwest of the Subject Property is known to contain soils contaminated with volatile organic constituents (VOCs), petroleum, polycyclic aromatic hydrocarbons (PAHs), and lead (DEQ, 2001). Additionally, a soil vapor survey conducted by WET for the Railyard in 2016 revealed potential for vapor intrusion in the vicinity of the Subject Property. Groundwater contaminated with tetrachloroethene (PCE) is estimated to extend onto the southern portion of Subject Property as shown in Figures 1 and 2. Due to the Subject Property's proximity to the Railyard, a Phase I ESA was forgone in lieu of conducting a focused Phase II ESA to ensure the health and safety of workers who would be involved in construction of the center as well as future employees and users of the center.

The scope of work for this ESA included assessment of the following contaminants of potential concern (COPCs):

- VOCs in Subject Property soils and soil vapor,
- PAHs in Subject Property soils,
- Extractable Petroleum Hydrocarbons (EPH) in Subject Property soils,
- Resource Conservation and Recovery Act (RCRA) metals in Subject Property soils.

2 FIELD ACTIVITIES

Field activities were conducted in accordance with the American Society for Testing and Materials (ASTM) standard for Phase II ESAs (ASTM E1903-19), WET standard operating procedures (SOPs), and Occupational Safety and Health Act (OSHA) regulations. Prior to investigation activities, utility locates were performed using Montana's One Call system. All test pit and soil vapor monitoring point (VMP) locations were found to be free of underground utilities.

2.1 SOIL VAPOR INVESTIGATION

The soil vapor investigation activities included soil VMP installation, seal testing of VMPs, and collection of soil vapor samples for laboratory analysis.

WET installed two SVPs at the Subject Property (VW-1 and VW-2) using Geoprobe with direct push technology on January 19th, 2024. The location of VMPs were selected based on the proposed building location and are shown on Figure 2.

To detect potential breakthrough of surface air in the soil vapor points, seal checks were performed in accordance with the procedures described in Montana Department of Environmental Quality's (DEQ) Vapor Intrusion Guidance (MDEQ, 2021). High purity helium was introduced into a shroud placed over each VMP until the concentration of helium under the

shroud was at least 20% as measured with a helium meter. Three tubing volumes of air from each probe were then purged while monitoring for the presence of helium to demonstrate the integrity of VMP seal. No helium was detected in the air purged from any of the VMPs; therefore, the seals were considered adequate. The soil vapor samples were collected into individually certified, 6-liter summa canisters, fitted with flow controllers set to 200 milliliters per minute (mL/min).

After collection, all samples were placed in the laboratory provided carrier using the original protective carton, along with the regulators and shipped to Pace Analytical Services, LLC in Mount Juliet, TN for analysis of VOCs. Field forms and notes taken during the soil vapor investigation activities are included as **Appendix A**. Soil vapor laboratory analytical results are included as **Appendix B**, and the associated data validation report of analytical data is included as **Appendix C**.

2.2 SOIL INVESTIGATION

The soil investigation activities included oversight of test pit excavation, field screening soils for VOCs using a calibrated photoionization detector (PID); field screening soils for metals using a calibrated handheld X-ray fluorescence (XRF) analyzer, and soil sample collection for laboratory analysis. Locations of test pits were selected based on the proposed wellness center building footprint and proximity to the estimated extent of groundwater contamination originating from the Railyard.

WET personnel oversaw test pit excavation activities on January 24th, 2024. Three test pits (TP1, TP-2 and TP-3) were excavated to a total depth of 10 feet below ground surface (ft bgs). Two test pits were located within the anticipated wellness center building footprint; one test pit was located near the estimated extent of groundwater PCE contamination. Additionally, two five-point composite surface soil samples were collected from the east side of the Subject Property within the proposed parking lot footprint. Test pit and composite sample points are depicted on Figure 2.

A sample for laboratory analysis was collected from the surface soil (0-2 ft bgs) of each test pit. Soil from the 2–10 ft bgs interval was field screened for the presence of VOCs and metals. Screening for VOCs included using a PID and visual and olfactory observations. Soils were field screened for metals using a handheld XRF. If soils exhibited evidence of contamination, a sample was collected for laboratory analysis. Evidence of contamination was defined as elevated PID readings (\geq 100 parts per million [ppm]), elevated XRF readings (Arsenic \geq 18 ppm, Lead \geq 320 ppm), or evidence of staining or odor. No evidence of contamination was noted in any test pit; therefore, only surface soil samples were collected for laboratory analysis.

Due to frozen ground conditions, the five-point composite surface soil samples were obtained by using an excavator to scrape surface soil in the approximate locations depicted on Figure 2. Samples C-1 and C-2 were composites of five sub-samples (each) collected at the approximate locations depicted on Figure 2.

Immediately after collection, samples were placed on ice and shipped to Energy Laboratories in Helena, Montana for analysis of VOCs, PAHs, EPHs and RCRA metals. Field forms and notes taken during the soil investigation activities are included as **Appendix D**. Soil laboratory analytical results are included as **Appendix E**, and the associated data validation report of analytical data is included as **Appendix F**.

2.3 INVESTIGATION-DERIVED WASTE

Sampling activities utilized disposable equipment. The non-indigenous IDW such as used sample scoops, ziplock bags, and nitrile gloves was disposed of as standard municipal waste. Soils were segregated into surface and subsurface during excavation. Following the completion of sampling activities, test pits were backfilled by placing subsurface followed by surface soil into the pit it was excavated from.

2.4 DEVIATIONS FROM WP

No deviations were encountered during field activities.

3 RESULTS

Analytical laboratory results from soil vapor and soil sampling are summarized in **Tables 1** and **2**, respectively.

3.1 SOIL VAPOR INVESTIGATION

The analytical soil vapor results indicate detection of VOCs. The indoor air screening levels presented in **Table 1** are not appropriate to screen soil vapor results. However, they are included on the table and are used for reference to evaluate the potential risk of vapor intrusion. Concentrations of all ROD constituents were below all applicable screening levels for all soil vapor samples. Because screening levels have not been developed for soil vapor, results were compared to EPA regional screening levels (RSLs) to evaluate whether further evaluation was warranted. Concentrations of chloroform in all soil vapor samples were above the EPA residential ($0.12 \mu\text{g}/\text{m}^3$) and industrial ($0.53 \mu\text{g}/\text{m}^3$) RSL screening levels for indoor air, so additional evaluation was warranted. In accordance with DEQ's Vapor Intrusion Guidance (MDEQ, 2021) an attenuation factor of 0.03 was applied to the chloroform concentrations to conservatively estimate the resulting concentration of chloroform in indoor air from the soil vapor samples collected. When these attenuated concentrations were compared to the EPA RSLs the concentration in the sample collected from VW-2 (SV-2) exceeds the EPA residential screening level. The anticipated future use of the building is commercial/industrial.

3.2 SOIL INVESTIGATION

Concentrations of analytes in soil samples were compared to Montana DEQ risk-based screening levels (RBSLs) and EPA RSLs. All concentrations of VOCs, PAHs, and total extractable hydrocarbons were below Railyard ROD cleanup levels and all applicable screening levels, indicating impacts of these constituents are not present at the Subject Property.

Concentrations of arsenic in soil samples were above the EPA RSL; however, they were below the Montana Background Threshold Value (BTV) for arsenic, indicating the arsenic is naturally occurring. Concentrations of lead and barium in the composite soil samples (C-1 and C-2) were

commensurate with BTVs and were below the EPA RSLs, indicating the metals are likely due to natural sources. With the exception of the sample collected from TP-3, all soil samples were commensurate with the BTV for total chromium (41.7 mg/kg). No screening level has been developed for total chromium and it is not a ROD constituent.

4 CONCLUSIONS AND RECOMMENDATIONS

The focused ESA for the Subject Property indicated that impacts related to the BN Livingston Shop Complex are not present in soil and will not pose a risk to human health during wellness center construction or use.

Chloroform was detected in all soil vapor samples; the chlorination of drinking water is a potential source of chloroform in soil vapor. Another potential source of chloroform is degradation of chlorinated solvents such as PCE (Reductive Dichlorination, 2023). Although PCE is a known contaminant related to the Railyard, chloroform is routinely sampled for but rarely detected in groundwater. When it has been detected in groundwater, it has been at concentrations well below all applicable screening levels. Regardless of the source of chloroform detected in soil vapor at the Subject Property, WET recommends installation of a vapor barrier and/or active mitigation system out of an abundance of caution to protect indoor air quality in the future wellness center. A properly designed and constructed vapor barrier and/or active mitigation system would be effective at preventing potential vapor intrusion from any subsurface source whether that source is related to irrigation activities or the adjacent railyard.

CASE NARRATIVE

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

GLOSSARY OF TERMS

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

Abbreviations and Definitions

MDL	Method Detection Limit.	¹ Cp
ND	Not detected at the Reporting Limit (or MDL where applicable).	² Tc
RDL	Reported Detection Limit.	³ Ss
Rec.	Recovery.	⁴ Cn
RPD	Relative Percent Difference.	⁵ Sr
SDG	Sample Delivery Group.	⁶ Qc
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.	⁷ GI
U	Not detected at the Reporting Limit (or MDL where applicable).	⁸ AI
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.	⁹ Sc
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.	
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.	
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.	
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state "ND" (Not Detected) or "BDL" (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.	
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.	
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.	
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.	
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.	
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.	
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.	

Qualifier Description

B	The same analyte is found in the associated blank.
J	The identification of the analyte is acceptable; the reported value is an estimate.

METHOD(S)/ANALYSES	
TO-15SIM: Volatile Organic Compounds (VOCs)	VOCs by MS – Selected Ion Monitoring

QUALIFIER DEFINITIONS	
U	The analyte was analyzed for but was not detected above the level of the adjusted detection limit or quantitation limit, as appropriate.
UJ	The analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
J	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
J-	The result is an estimated quantity, but the result may be biased low.
J+	The result is an estimated quantity, but the result may be biased high.
R	The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.

CHECKLIST

A. Field QA/QC			
A1. Was field documentation provided and complete?	Yes	No	N/A
	X		
A2. Were calibration checks within project stabilization criteria (or other applicable range)?	Yes	No	N/A
	X		
A3. Was chain-of-custody (COC) and container label documentation accurate and complete?	Yes	No	N/A
	X		
A4. Were all planned samples able to be collected?	Yes	No	N/A
	X		
A5. Were samples submitted received by the laboratory in good condition?	Yes	No	N/A
	X		
A6. Other issues? If yes, detail below.	Yes	No	N/A
		X	
Field Preservation			
A7. Were samples submitted within a reasonable time frame to meet extraction/prep and/or analytical hold times (HT)? If no, detail below.	Yes	No	N/A
	X		
A8. Were samples submitted properly filtered and/or preserved?	Yes	No	N/A
			X
A9. Were samples received by the laboratory within temperature and/or pH requirements? If no, detail below.	Yes	No	N/A
			X
A10. Were volatile samples collected with zero headspace, or was enough volume available for analysis without using any containers with bubbles? If no, detail below.	Yes	No	N/A
			X
Field Precision			
A11. Were field duplicate (FD) samples required?	Yes	No	N/A
	X		
A12. Were FD samples collected at the correct frequency? If no, all field data points are qualified as estimated (J/UJ) due to lack of field precision QA/QC (FDX).	Yes	No	N/A
	X		
A13. Were FD relative percent difference (RPD) results at or below control limits (CLs)? If no, detail below.	Yes	No	N/A
		X	
<ul style="list-style-type: none"> ❖ Benzene: The original sample result was detected (<5xRL) while the duplicate sample result was ND and replaced with zero to produce an RPD of 200%, >25% CL. The absolute difference between the detection original sample result and zero (ND duplicate sample result) was ≤2xRL. <ul style="list-style-type: none"> ➤ No qualification required. ❖ Chloroethane RPD was 38.2%, >25% CL. The original and duplicate sample results were <5xRL. The absolute difference between the original and duplicate sample results was ≤2xRL. <ul style="list-style-type: none"> ➤ No qualification required. 			

- ❖ Chloroform RPD was 145%, >25% CL. The original and duplicate sample results were >5xRL.
 - All samples were qualified as estimated (J) due to detected results.
- ❖ Ethylbenzene RPD was 71.8%, >25% CL. The original and duplicate sample results were <5xRL. The absolute difference between the original and duplicate sample results was ≤2xRL.
 - No qualification required.
- ❖ Tetrachloroethylene RPD was 37.9%, >25% CL. The original and duplicate sample results were <5xRL. The absolute difference between the original and duplicate sample results was ≤2xRL.
 - No qualification required.

Field Blanks

A14. Was field decontamination of sampling equipment required?	Yes	No	N/A
		X	
A15. Were equipment rinse blank (ERB) samples required?	Yes	No	N/A
			X
A16. Were ERB samples collected at the correct frequency? If no, all field data points are qualified (J/UJ) as estimated due to lack of field QA/QC (ERBX).	Yes	No	N/A
			X
A17. Were all ERB results non-detect (ND)? If no, detail below.	Yes	No	N/A
			X
A18. Were field blank (FB) samples required?	Yes	No	N/A
		X	
A19. Were FB samples collected at the correct frequency? If no, all data is qualified as estimated due to lack of field QA/QC (FBX).	Yes	No	N/A
			X
A20. Were all FB results ND? If no, detail below.	Yes	No	N/A
			X
A21. Were trip blank (TB) samples required (volatiles analyses)?	Yes	No	N/A
		X	
A22. Were TB samples submitted as required (one per shipping container)? If no, all data is qualified as estimated due to lack of TB (TBX).	Yes	No	N/A
			X

Field QA/QC Summary

Out of 69 total data points:

- 66 data points (95.7% of total) remain unqualified.
- Out of 3 data points (4.3% of total) qualified as estimated:
 - No data points were due to preservation issues.
 - No data points were due to blank contamination.
 - All 3 data points were due to poor replication.
- No data points were rejected.

B. Laboratory QA/QC

B1. Did the laboratory use appropriate methods to extract/prep and analyze all samples within HT?	Yes	No	N/A
	X		
B2. Were there any results reported below the RL (J) or in exceedance of (E) or over (O) instrument calibration? If yes, detail below.	Yes	No	N/A
		X	
B3. Were there any laboratory qualifiers that will not affect the data quality? If so, please list below.	Yes	No	N/A
		X	
B4. Other issues? If yes, detail below.	Yes	No	N/A
			X

Laboratory Blanks

B5. Were TB results ND? If no, detail below.	Yes	No	N/A
			X
	Yes	No	N/A

B6. Were method blank (MB) samples analyzed at a frequency of one per 20 samples or one per batch?		X	
B7. Were MB results ND? If no, detail below.	Yes	No	N/A
<ul style="list-style-type: none"> ❖ R4023198-3: Lab IDs 04 & 06 <ul style="list-style-type: none"> ➢ Cis-1,3-dichloropropene was detected at 0.0140 ppbv, <RL of 0.0200 ppbv. <ul style="list-style-type: none"> ▪ The associated samples were laboratory certified summa cannisters and are not reported in this DVCSR. ❖ R4027132-3: Lab IDs 01 & 02 <ul style="list-style-type: none"> ➢ Chloromethane was detected at 0.00724 ppbv, <RL of 0.0300 ppbv. <ul style="list-style-type: none"> ▪ No qualification was required for any samples due to all results ≥RL and ≥MB. ❖ R4029067-3: Lab ID 05 <ul style="list-style-type: none"> ➢ Chloromethane was detected at 0.0193 ppbv, <RL of 0.0300 ppbv. <ul style="list-style-type: none"> ▪ The associated sample was a laboratory certified summa cannister and is not reported in this DVCSR. 			
Laboratory Accuracy			
B8. Were initial/continuing calibration verification (ICV/CCV) analyses performed at the appropriate frequency?	Yes	No	N/A
		X	
B9. Were ICV/CCV percent recoveries within CLs? If no, detail below.	Yes	No	N/A
		X	
B10. Were laboratory control samples (LCS) / fortified blanks (LFB) analyzed at a frequency of one per 20 samples or one per batch?	Yes	No	N/A
	X		
B11. Were LFB/LCS percent recoveries within CLs? If no, detail below.	Yes	No	N/A
	X		
B12. Were matrix spike (MS) samples analyzed at a frequency of one per 20 samples or one per batch?	Yes	No	N/A
		X	
B13. Were there any MS or MSDs where the result was >4x the spike amount and were therefore not calculated by the laboratory or are exempt from qualification?	Yes	No	N/A
		X	
B14. Were MS percent recoveries within CLs? If no, detail below.	Yes	No	N/A
		X	
B15. Were surrogate recoveries within CLs (organics only)? If no, detail below.	Yes	No	N/A
		X	
Laboratory Precision			
B16. Were laboratory duplicates analyzed at a frequency of one per 20 samples or one per batch, either through laboratory sample duplicates (LSD), LCS duplicates (LCSD), or MS duplicates (MSD)?	Yes	No	N/A
	X		
B17. Were laboratory duplicate RPD results at or below CLs? If no, detail below.	Yes	No	N/A
	X		
B16. Were serial dilution (SD) samples analyzed at a frequency of one per 20 samples or one per batch (metals only)?	Yes	No	N/A
		X	
B17. Were SD RPD results at or below CLs? If no, detail below.	Yes	No	N/A
		X	
Laboratory QA/QC Summary			
Out of 69 total data points, all 69 data points (100%) remain unqualified.			

OVERALL SUMMARY

Data Quality

Out of 69 total data points:

- 66 data points (95.7%) remain unqualified and are considered quantitative.
- Out of 3 data points (4.3%) qualified as estimated and assigned as qualitative:
 - All 3 data points were due to field QA/QC.
 - No data points were due to laboratory QA/QC.

- No data points were rejected.

Completeness

Out of 3 samples planned, 3 samples were completed. This sample delivery group is 100% complete.

Out of 3 analyses planned, 3 analyses were completed. This work order is 100% complete.

Out of 69 data points produced, 69 data points were useable. This data package is 100% complete.

The analyses presented in this report were performed by Energy Laboratories, Inc., 3161 E. Lyndale Ave., Helena, MT 59604, unless otherwise noted. Any exceptions or problems with the analyses are noted in the report package. Any issues encountered during sample receipt are documented in the Work Order Receipt Checklist.

The results as reported relate only to the item(s) submitted for testing. This report shall be used or copied only in its entirety. Energy Laboratories, Inc. is not responsible for the consequences arising from the use of a partial report.

ANALYTICAL SUMMARY REPORT

If you have any questions regarding these test results, please contact your Project Manager.

Report Approved By:

CLIENT: Water and Environmental Technologies
Project: 4RANGESM01/2024.2021
Work Order: H24010643

Report Date: 02/14/24

CASE NARRATIVE

Tests associated with analyst identified as ELI-B were subcontracted to Energy Laboratories, 1120 S. 27th St., Billings, MT, EPA Number MT00005.

Qualifiers:

RL - Analyte Reporting Limit

A - Analyte level was greater than four times the spike level - in accordance with the method, percent recovery is not calculated

ND - Not detected at the Reporting Limit (RL)

Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

The reference date for Radon analysis is the sample collection date. The reference date for all other Radiochemical analyses is the analysis date. Radiochemical precision results represent a 2-sigma Total Measurement Uncertainty.

For methods that require zero headspace or require preservation check at the time of analysis due to potential interference, the pH is verified at analysis. Nonconforming sample pH is documented as part of the analysis and included in the sample analysis comments.

SW8260B: Volatile Organic Compounds (VOCs)	Short List
SW8270E: Semi-Volatile Organic Compounds (SVOCs)	Low Level by Selected Ion Monitoring (SIM)

QUALIFIER DEFINITIONS	
U	The analyte was analyzed for but was not detected above the level of the adjusted detection limit or quantitation limit, as appropriate.
UJ	The analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
J	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
J-	The result is an estimated quantity, but the result may be biased low.
J+	The result is an estimated quantity, but the result may be biased high.
R	The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.

CHECKLIST

A. Field QA/QC		
A1. Was field documentation provided and complete?	Yes	No
	X	
A2. Were calibration checks within project stabilization criteria (or other applicable range)?	Yes	No
	X	
A3. Was chain-of-custody (COC) and container label documentation accurate and complete?	Yes	No
	X	
A4. Were all planned samples able to be collected?	Yes	No
	X	
A5. Were samples submitted received by the laboratory in good condition?	Yes	No
	X	
A6. Other issues? If yes, detail below.	Yes	No
		X
Field Preservation		
A7. Were samples submitted within a reasonable time frame to meet extraction/prep and/or analytical hold times (HT)? If no, detail below.	Yes	No
	X	
A8. Were samples submitted properly filtered and/or preserved?	Yes	No
		X
A9. Were samples received by the laboratory within temperature and/or pH requirements? If no, detail below.	Yes	No
		X
A10. Were volatile samples collected with zero headspace, or was enough volume available for analysis without using any containers with bubbles? If no, detail below.	Yes	No
		X
Field Precision		
A11. Were field duplicate (FD) samples required?	Yes	No
	X	
	Yes	No
		N/A

A12. Were FD samples collected at the correct frequency? If no, all field data points are qualified as estimated (J/UJ) due to lack of field precision QA/QC (FDX).	X		
A13. Were FD relative percent difference (RPD) results at or below control limits (CLs)? If no, detail below.	Yes	No	N/A
C-2 (original) & FD2-C-24-01-25 (duplicate): representing samples: C-1, C-2, and FD2-24-01-25 ❖ Benzo(k)fluoranthene (SW8270E) RPD was 42.4%, >35% CL. The original and duplicate sample results were <5xRL. The absolute difference between the original and duplicate sample results was ≤2xRL. ➤ No qualification required.			
Field Blanks			
A14. Was field decontamination of sampling equipment required?	Yes	No	N/A
		X	
A15. Were equipment rinse blank (ERB) samples required?	Yes	No	N/A
			X
A16. Were ERB samples collected at the correct frequency? If no, all field data points are qualified (J/UJ) as estimated due to lack of field QA/QC (ERBX).	Yes	No	N/A
			X
A17. Were all ERB results non-detect (ND)? If no, detail below.	Yes	No	N/A
			X
A18. Were field blank (FB) samples required?	Yes	No	N/A
		X	
A19. Were FB samples collected at the correct frequency? If no, all data is qualified as estimated due to lack of field QA/QC (FBX).	Yes	No	N/A
			X
A20. Were all FB results ND? If no, detail below.	Yes	No	N/A
			X
A21. Were trip blank (TB) samples required (volatiles analyses)?	Yes	No	N/A
	X		
A22. Were TB samples submitted as required (one per shipping container)? If no, all data is qualified as estimated due to lack of TB (TBX).	Yes	No	N/A
	X		
Field QA/QC Summary			
Out of 655 total data points, all 655 data points (100%) remain unqualified.			
B. Laboratory QA/QC			
B1. Did the laboratory use appropriate methods to extract/prep and analyze all samples within HT?	Yes	No	N/A
	X		
B2. Were there any results reported below the RL (J) or in exceedance of (E) or over (O) instrument calibration? If yes, detail below.	Yes	No	N/A
	X		
TEH in TP-2:1-2 was qualified as estimated (J) due to a detection <RL.			
B3. Were there any laboratory qualifiers that will not affect the data quality? If so, please list below.	Yes	No	N/A
	X		
96 data points were assigned a D qualifier, meaning the RL was increased due to the sample matrix.			
B4. Other issues? If yes, detail below.	Yes	No	N/A
			X
Laboratory Blanks			
B5. Were TB results ND? If no, detail below.	Yes	No	N/A
	X		
B6. Were method blank (MB) samples analyzed at a frequency of one per 20 samples or one per batch?	Yes	No	N/A
		X	
B7. Were MB results ND? If no, detail below.	Yes	No	N/A
		X	
❖ Method SW6020			

- Batch 70200
- Arsenic was detected at 0.2 mg/kg, <RL of 1 mg/kg.
 - No qualification was required for any samples due to all results $\geq 10 \times \text{MB}$.

Laboratory Accuracy

B8. Were initial/continuing calibration verification (ICV/CCV) analyses performed at the appropriate frequency?	Yes	No	N/A
	X		
B9. Were ICV/CCV percent recoveries within CLs? If no, detail below.	Yes	No	N/A
		X	
<p>❖ Method SW8270E</p> <p>➤ Batch B_186749: Lab IDs 005-007</p> <ul style="list-style-type: none"> ▪ Surr: Nitrobenzene-d5 was recovered at 131%, >120% upper CL. • All associated recovery results were qualified as estimated (J). 	Yes	No	N/A
	X		
B10. Were laboratory control samples (LCS) / fortified blanks (LFB) analyzed at a frequency of one per 20 samples or one per batch?	Yes	No	N/A
		X	
B11. Were LFB/LCS percent recoveries within CLs? If no, detail below.	Yes	No	N/A
		X	
<p>❖ Method SW8260B</p> <p>➤ Batch 70142: Lab IDs 001-007</p> <ul style="list-style-type: none"> ▪ Bromoform was recovered at 122%, >117% upper CL. <ul style="list-style-type: none"> • No qualification was required for any samples due to all ND results. ▪ Bromomethane was recovered at 221%, >121% upper CL. <ul style="list-style-type: none"> • No qualification was required for any samples due to all ND results. ▪ Chloroethane was recovered at 141%, >140% upper CL. <ul style="list-style-type: none"> • No qualification was required for any samples due to all ND results. ▪ Styrene was recovered at 132%, >127% upper CL. <ul style="list-style-type: none"> • No qualification was required for any samples due to all ND results. 	Yes	No	N/A
	X		
B12. Were matrix spike (MS) samples analyzed at a frequency of one per 20 samples or one per batch?	Yes	No	N/A
	X		
B13. Were there any MS or MSDs where the result was >4x the spike amount and were therefore not calculated by the laboratory or are exempt from qualification?	Yes	No	N/A
	X		
<p>❖ Method SW6020</p> <p>➤ Batch 70200</p> <ul style="list-style-type: none"> ▪ H24010643-001AMS: TP-1:1-2 <ul style="list-style-type: none"> • Barium (MS/MSD) 	Yes	No	N/A

Yes	No	N/A
		X	

- ◆ No qualification was required for any samples due to all ND results.
- Pyrene was recovered at 61% (MS & MSD), <62% lower CL.
 - ◆ No qualification was required for any samples due to all ND results.
- Anthracene was recovered at 65% (MSD), <66% lower CL.
 - ◆ No qualification was required for any samples due to all ND results.
- Fluoranthene was recovered at 69% (MSD), <70% lower CL.
 - ◆ No qualification was required for any samples due to all ND results.
- Surr: Nitrobenzene-d5 was recovered at 107% (MSD), >106% upper CL.
 - ◆ All associated recovery results were qualified as estimated J.

B15. Were surrogate recoveries within CLs (organics only)? If no, detail below.	Yes	No	N/A
		X	

- ❖ Sample TP-1:1-2
 - Method SW8270E
 - Surr: Nitrobenzene-d5 was recovered at 38.0%, between the expanded lower CL of 10% and the lower CL of 43%.
 - All SVOA compounds were qualified as estimated (UJ) due to ND results.
- ❖ Sample TP-2:1-2
 - Method SW8270E
 - Surr: Nitrobenzene-d5 was recovered at 39.0%, between the expanded lower CL of 10% and the lower CL of 43%.
 - All SVOA compounds were qualified as estimated (UJ) due to ND results.
- ❖ Sample TP-3:1-2
 - Method SW8270E
 - Surr: Nitrobenzene-d5 was recovered at 36.0%, between the expanded lower CL of 10% and the lower CL of 43%.
 - All SVOA compounds were qualified as estimated (UJ) due to ND results.
- ❖ Sample FD1-TP-24-01-25
 - Method SW8270E
 - Surr: Nitrobenzene-d5 was recovered at 40.0%, between the expanded lower CL of 10% and the lower CL of 43%.
 - All SVOA compounds were qualified as estimated (UJ) due to ND results.

Laboratory Precision

B16. Were laboratory duplicates analyzed at a frequency of one per 20 samples or one per batch, either through laboratory sample duplicates (LSD), LCS duplicates (LCSD), or MS duplicates (MSD)?	Yes	No	N/A
	X		

B17. Were laboratory duplicate RPD results at or below CLs? If no, detail below.	Yes	No	N/A
	X		

- ❖ Method SW8260B
 - Batch R192076: Lab ID 008
 - H24010640-001AMSD: unassociated work order sample
 - Styrene RPD was 22%, >20% CL.
 - ◆ No qualification required due to a ND result.

B16. Were serial dilution (SD) samples analyzed at a frequency of one per 20 samples or one per batch (metals only)?	Yes	No	N/A
	X		

B17. Were SD RPD results at or below CLs? If no, detail below.	Yes	No	N/A
	X		

Laboratory QA/QC Summary

Out of 655 total data points:
• 568 data points (86.7%) remain unqualified.
• Out of 87 data points (13.3%) qualified as estimated:
• 1 data point (5.7% of qualified, 0.2% of total) were due to detections <RL.
• No data points were due to laboratory blank contamination.
• All 87 data points were due to poor accuracy (high CCV and LCS recoveries, MS/MSD failures, and low SRs).
• No data points were due to poor precision.
• No data points were rejected.

OVERALL SUMMARY

Data Quality
Out of 655 total data points:
• 568 data points (86.7%) remain unqualified and are considered quantitative.

- Out of 87 data points (13.3%) qualified as estimated and assigned as qualitative:
 - No data points were due to field QA/QC.
 - All 87 data points were due to laboratory QA/QC.
- No data points were rejected.

Completeness

Out of 7 samples planned, 7 samples were completed. This sample delivery group is 100% complete.

Out of 43 analyses planned, 43 analyses were completed. This work order is 100% complete.

Out of 655 data points produced, 655 data points were useable. This data package is 100% complete.
